Terms and Information

TERMS OF PAYMENT—1. **Cash Plan:** This plan earns 3% discount and free boxing. On bulky stock, boxing sometimes amounts to 6% or 8% so this plan earns a total of from 6% to 10% discount. Under this plan we book the order, reserve the stock until September 1st for Fall shipments and March 1st for Spring shipments. Bills are due on these dates and remittances must be received on or before September 1st, or March 1st, to earn the discount. 2. **Partial Payment Plan:** Whereby one-third amount of order is remitted in advance and the balance goes forward Freight or Express C. O. D. payable at destination. 3. **Charge Account Plan:** Goods will be shipped on charge account only to customers of approved credit who supply satisfactory trade and bank references allowing time for investigation. Fall shipments due December 1st. Spring shipments due June 1st.

SHIPPING SEASONS—Fall: Fall season opens as soon as we have had sufficient rain to put the ground in good condition for digging. Usually this occurs about the first week in September. The Fall season closes about November 15th. After that date the weather is usually very uncertain and ground liable to freeze solid. Spring: Spring season opens as soon as the frost is out of the ground, usually about April 1st, so we can start to dig, continuing until May 15th. By this date all stock is too far advanced in growth to take up and transplant successfully.

PRICES—Are limited to Fall, 1927, and supersede all previous lists and ARE SUBJECT TO CHANGE WITHOUT NOTICE.

RATES—Five of same variety and size at the ten rate. Fifty of the same variety and size at the 100 rate. Five hundred of the same variety and size at the 1,000 rate.

BOXING AND PACKING—Boxing and packing will be charged for at actual cost of material used except on cash orders. We make no charge for delivery to railroad station.

SPECIAL NOTICE—Correspondents are requested to use their printed business letterheads. This list is for the trade only and in justice to our trade customers we use every possible effort to limit distribution of trade prices to those we know to be entitled to receive them. **USE PRINTED STATIONERY.**

LOCATION—We are situated in Northern Illinois, on well drained, rich, fertile soil, located 42 miles northwest of Chicago. Visitors are always welcome. For complete directions for reaching Nursery see page 40.

NOTE—Copy of our complete retail descriptive catalog of Evergreens in colors will gladly be sent upon request. Illustrations and descriptions are accurate, authentic and true to life.

ORDERS CALLED FOR AT NURSERY—Thursday of each week during the shipping season is set aside for orders to be called for at the Nursery. Orders should be in by Monday, to enable us to have them ready for delivery by Thursday.

We accept all orders upon condition that they shall be void should any injury befall stock from causes over which we have no control. Prices do not include any guarantee as to growth.

Hill's Choice Evergreens for Lining Out

The varieties and sizes offered in this section of our catalog include the following:

1. Seedlings (o)—one year, two years, and three years old.
2. Once transplanted (x), seedlings, cuttings, or grafts, which have been transplanted and allowed to remain one or two years before being sold.
3. Twice transplanted (xx), trees which have been moved twice in the nursery.
4. Twice transplanted B&B (xx), trees which have been twice transplanted and dug with ball of earth and burlapped.

All of the above trees are suitable for nursery planting. The size trees to select depends on how soon you expect to market the trees, your facilities for handling, and the individual characteristics of the trees themselves. We will gladly assist you in recommending sizes and methods of handling, if requested.

Since 1855 it has been our steadfast purpose to continually improve existing forms and seek out hardier types. In our search for seeds, which we assemble from many foreign lands, we obtain only seeds from definite origin and propagate those best adapted to conditions in this country.

In buying Evergreens from Hill's you are dealing with the largest growers in America, who have been growing Evergreens for 70 years. When making comparisons with other stock on the market do not compare prices only. Be sure you are buying the best strains of Evergreens, true to name, properly root-pruned and transplanted, dug and handled under proper conditions and packed to insure safe arrival.

FIRS

Variety	10	100	1000
<i>Abies arizonica</i> (Cork Fir)			

One of the most striking and beautiful Evergreens. It grows tall and slender and makes an elegant specimen. The foliage is silvery blue, often surpassing the coloring of the Blue Spruce. The bark is of a corky nature and of a light cream color. We offer the true hardy type from high altitudes in Arizona. *Abies Lasiocarpa*, a variety sometimes offered as *Arizona*, lacks many points of merit compared to the true hardy variety which we grow.

2-4 inch x Once Transplanted.....	\$.....	\$10.00	\$ 90.00
-----------------------------------	---------	---------	----------

Abies balsamea (Balsam Fir)

Foliage is dark green above, silvery beneath. Rapid grower. It has always been popular on account of its "Balsam odor." The characteristic odor of the northern woods is chiefly due to this fir. The young growths are often used for making the favorite "Balsam pillows." Our seed is gathered from northern sources. Does very well in damp places.

4-6 inch x Once Transplanted.....	7.00	60.00
-----------------------------------	------	-------

Abies balsamea macrocarpa (Long needled Balsam Fir)

A form having longer heavier needles and larger cones. In climates where the heavy needled firs are not hardy this new variety will be found most interesting and desirable. First discovered in 1886 by a Nurseryman, Mr. John Wilcox, near Omro, Wisconsin. Prof. Sargent of the Arnold Arboretum describes it as "an exceptionally beautiful and desirable Fir."

4-6 inch x Once Transplanted.....	7.00	60.00
-----------------------------------	------	-------

Concolor or White Fir

(Abies concolor)

The name Concolor, given to this tree by Dr. Englemann, who discovered it about the middle of the last century, signifies even color—both the upper and under sides of the needles are beautifully grayish blue. A well-known evergreen authority says: "Concolor Fir is the showiest of all Firs. In my opinion it is the cheeriest of all Evergreens in winter. It retains its lower branches, has no insect enemies, and is the best Fir tree to withstand heat and drought." We are careful to obtain our seed supply from northern Colorado, which produces trees of absolute hardness, with striking foliage varying in color from light green to deep soft blue and with medium short needles. The strain of Concolor Fir from New Mexico, where seed is cheap and abundant, is much inferior, inclined to winter-kill, and is rather straggly, open appearance. Our trees are the true Colorado type. It is a tall symmetrical grower and is long lived under cultivation.

(Chinese Juniper)

Juniperus chinensis albovariegata
(Whiteleaf Chinese Juniper)

FIRS (Continued)

Variety	10	100	1000
Abies douglassi (Douglas Fir) (See Pseudotsuga Douglassi)			
Abies Fraseri (Fraser Fir)			
The "Southern Balsam" or "She Balsam" as it is often called, is native in the Southern Appalachian Mountains, especially in North Carolina and Tennessee. It is a compact pyramidal grower, having dark green lustrous leaves, blue beneath. The foliage is very fragrant. Under cultivation it is not a large growing tree, probably not reaching over 20 to 25 feet. In New England it does especially well.			
4-6 inch x Once Transplanted.....	\$.....	\$ 7.00	\$ 60.00

Abies homolepis (Nikko Fir)			
"A handsome and promising tree in this climate (Massachusetts) is the Japanese Abies Homolepis, or as it has been more often called, Abies Brachyphylla. This is a large tree on the mountains of central Japan with dark green leaves, silvery white on the lower surface and violet purple cones. The largest specimen in the Hunnewell Pinetum is now 55 feet high with branches sweeping the ground. The Arbor-etum trees are smaller but already produce their handsome cones."—Arnold Arboretum. It is quite rare at present and our stock is limited. This most excellent Fir should be more generally used.			
2-4 inch o 2 yr.		6.00	50.00
4-6 " x Once Transplanted		10.00	90.00

Abies veitchi (Veitch Fir)			
Attractive slender habit, suitable for limited areas of medium height. The attractive bright, shiny green foliage is silvery white beneath so that the swaying of the branches produces a most unusual sight. It is a tree of Japanese origin discovered by John Veitch, the English Nurseryman, in 1860 in the Japanese moun-tains. While it is considered hardy in the northern states somewhat sheltered positions are recommended.			
4-6 inch x Once Transplanted		8.00	70.00

CEDAR (Cedrus)

The supply of Cedrus of all sizes is limited and preparation should be made at once to take care of the enormous future demand. Large specimens are finding a ready market at high prices. It is difficult to obtain lining out stock, even in small quantities, at the present time. The ever increasing demand for cedars is sufficient warranty for heavy plantings.—Western Florist.

Cedrus deodara (Deodar Cedar)			
Feathery artistic blue foliage, considered the most beautiful, ornamental Cedar for the Atlantic, Southern and Pacific Coast States. Deodar is a Hindu word, meaning Tree of the Gods. Almost unrivalled in the grandeur of its pendulous and lithe branches.			
2-4 inch o 1 yr.		8.00	70.00
6-8 " o 2 yr.		10.00	90.00

Cedrus libani (Cedar of Lebanon)			
When small the tree is of conical regularly shaped outline with wide spreading branches, but as the tree increases in age it assumes a round open head, a change from the beautiful to the picturesque. Aside from its ornamental value it is of peculiar interest for its scriptural and historical associations. It is said to be the most hardy of the Cedrus family.			
2-4 inch o 1 yr.		6.00	50.00

CHAMAECYPARIS

Chamaecyparis lawsoniana (Lawson Cypress)			
Native of Southern Oregon and Northern California. A beautiful, graceful tree, tall and symmetrical in growth. Delicate, feathery, bluish-green foliage. The trees we offer are seedlings containing trees of various types.			
4-6 inch o 2 yr.		5.00	40.00

CYPRESS

Cupressus sempervirens stricta (Columnar Italian Cypress)			
This famous tree is one which all nurserymen, who live in a climate where it is hardy, should grow. Its popularity is well known among all the trade. We offer trees grown from seed, which will produce a good proportion of trees with narrow columnar habit.			
2-4 inch o 1 yr.		3.50	25.00

50 of same variety and size at 100 rate; 500 at 1000 rate.

o—Indicates never transplanted. Suitable for bedding out.

DAPHNE

Daphne Cneorum (Rose Daphne)

Low growing Evergreen plant. Produces rosy-pink clusters of flowers that completely cover the plant and continue until freezing weather. Flowers are very fragrant. An ideal plant for garden or rockery. We offer rooted cuttings in flats. On account of the difficulty in transplanting small sizes, these plants will be sold by the flat and will be shipped undisturbed in the flat or cutting box. There will be about 150 plants in each lot.

1 yr. cuttings. Shipment in flats (150 to a flat).....	\$.....	\$10.00	\$ 90.00

JUNIPERS

Juniperus canadensis (See Juniper communis depressa).

Juniperus chinensis (Chinese Juniper)

One of the very finest hardy plants in cultivation. It forms a compact, pyramidal tree about 20 feet in height, of bright green color with glaucous prickly shoot in the spring. It has never been injured by the most severe winters. It also makes one of the leading Junipers for the South as it stands all kinds of planting conditions with remarkable ability. Its freedom from disease and great adaptability to extremes in temperature make it a most valuable plant. Do not overlook this valuable Juniper.

4- 6	Inch	o 1 yr.	7.00	60.00

1-1½	feet	xx " B&B	10.00	90.00

Juniperus chinensis albovariegata (White Leaf Chinese Juniper)

An upright grower having variegated white tips more conspicuous when the new growth is coming out. A choice and rare variety.

4-6 inch x Once Transplanted	17.50	165.00
------------------------------------	-------	--------

Juniperus chinensis columnaris (See *Juniperus chinensis pyramidalis*).

Pfitzer Juniper

(*Juniperus pfitzeriana*)

This remarkable tree is today in the front rank of ornamental Evergreen trees. Its great popularity is well earned. This is a Juniper that thrives in the hot climate of the South and still comes through the cold northern winters without a scratch. Nothing bothers it as it seems to be practically immune from plant pests of all kinds. If left alone it assumes an attractive, low, broad, irregular form. It was originated in Pfitzer's Nursery in Germany. Ludwig Spaeth, famous German nurseryman horticulturist, introduced it into general cultivation. Through him we obtained our original plants for propagation. By propagating our own stock from selected trees we are able to assure our customers the true type of robust trees with the gray or blue-green foliage.

Juniperus pfitzeriana
(Pfitzer Juniper)

[illegible]

50 of same variety and size at 100 rate; 500 at 1000 rate.

o—Indicates never transplanted. Suitable for bedding out.

Juniperus excelsa stricta
(Greek Juniper)

Juniperus communis
(Common Juniper)

Juniperus communis suecica
(Swedish Juniper)

Juniperus communis hibernica
(Irish Juniper)

Juniper Foliage

Probably no other Evergreen species offers so many variations as the Juniper. It is so very closely related to a number of other species in appearance, and bears both juvenile and adult foliage, both of which sometimes occur on the same plant and either one or the other predominates in other plants. It is also unisexual, having both masculine and feminine forms.

Juniperus sabina tamariscifolia
(Tamarix Leaved Juniper)

Juniperus virginiana
(Redcedar)

Juniperus scopulorum
(Hill's Silver Juniper)

Juniperus virginiana cannarti
(Cannart Redcedar)

JUNIPERS (Continued)

Variety	10	100	1000
Juniperus chinensis procumbens (See Juniperus japonica)			
Juniperus chinensis pyramidalis (Blue Column Chinese Juniper)			

This variety was introduced to cultivation by the United States Department of Agriculture, through the late F. N. Meyer. It forms a distinct, narrow pyramid with all the leaves a circular or needle-shaped. The foliage is remarkably decorative. There are two forms—the blue and the green—which we can now furnish in good plants of the true variety. Like other forms of J. Chinensis they are very hardy and also retain their desirable color effect during the winter.

The habit of growth resembles the well known Italian Cypress. This tree offers to planters in colder climates the extreme narrow growing form of Evergreens heretofore so much desired but unfortunately not obtainable in a dependable tree. We are glad to assure any customers of the absolute hardiness and dependability of this excellent variety.

1-1½ feet xx Twice Transplanted, B&B.....	\$15.00	\$.....	\$.....
Juniperus chinensis sargentii (Sargent Juniper) (Green)			
First collected by Professor Sargent in Japan in the autumn of 1892. This Juniper forms a low dense mat of wide-spreading branches covered with small dark green scale-like leaves, mixed with pointed ones. In the Arboretum it is now the handsomest of the Prostrate Junipers.			
6- 8 inch x Once Transplanted	25.00
10-12 " xx Twice Transplanted, B&B.....	12.50

Juniperus communis (Common Juniper)

This is an upright form of the Common Juniper of Europe. It grows narrow and pyramidal and has light green foliage. It is especially desirable for planting in the southern states, but is also quite hardy and is used in other localities.

6-8 inch o 2 yr.	4.50	35.00	
-----------------------	------	-------	--

Prostrate Juniper

(Juniperus communis depressa)

(Juniperus canadensis)

The well-known, valuable many stemmed Dwarf Juniper. Rarely exceeds 2 feet in height, good form of Juniper for ground cover. It is at home on sandy or gravelly hillsides fully exposed to the sun, where single plants often reach 15 feet or more in diameter. Is sometimes catalogued as Juniperus Communis which is erroneous. The name Juniperus Canadensis is also applied, which is a synonym. Grows native in various sections of the country, but we obtain our seed from Northern Wisconsin, which is the superior type.

1-1½ feet xx " " " "	12.50	115.00

GOLDEN PROSTRATE JUNIPER
(Juniperus communis depressa aurea)

The aurea type is the golden form, similar to the green type except in color. Our plants are reproduced from a carefully selected strain of plants of extra bright golden color, compact growth and of symmetrical form.

4-6 inch x Once Transplanted	20.00
1-1½ feet xx Twice Transplanted, B&B.....	20.00

PURPLE PROSTRATE JUNIPER
(Juniperus communis depressa plumosa)

A rare Evergreen of distinctive beauty. Silvery green in Spring, the mountains' purple hue in Autumn. Low growing and spreading in habit it adapts itself admirably to many uses. Being very hardy, it will grow under conditions that many Evergreens find unfavorable. For use in rock gardens, or filling-in at the base of taller-growing Evergreens, it is extremely useful, and in groups with other species it contrasts with pleasing effect. Its prostrate branches seldom lift themselves more than 18 inches from the ground.

Juniperus horizontalis douglassii
(Hill's Waukegan Juniper)

JUNIPERS (Continued)

Variety	10	100	1000
Juniperus communis hibernica (Irish Juniper)			
Very formal in outline and invaluable in Italian gardens or where architectural features are to be strongly emphasized. Foliage glaucous green. Grows 6 to 8 feet in height and not over one and a half feet in diameter. Not hardy in the extreme north.			
8-10 inch x Once Transplanted	\$.....	\$13.50	\$125.00
Juniperus communis suecica (Swedish Juniper)			
Similar to Irish Juniper, but more narrow in outline. Where extremely formal effects are desired the tall slender habit is very striking. Glaucous green foliage.			
4- 6 inch x Once Transplanted		13.00	120.00
8-10 " xx Twice Transplanted		25.00
1-1½ feet xx " " B&B	10.00	90.00
Juniperus excelsa stricta (Spiny Greek Juniper)			
One of the leading dwarf varieties. Very dense, narrow and conical, having a fine silvery glaucous color. Thrives in all parts of the country. Originated in an English nursery and has had wide distribution.			
4- 6 inch x Once Transplanted		15.00	140.00
6- 8 " x " "		20.00
10-12 " xx Twice Transplanted, B&B	10.00	90.00
1-1½ feet xx " "	12.50	110.00
Juniperus horizontalis douglassi (Waukegan Juniper)			
An interesting new creeping Juniper. Very low and compact, making a dense mat. Soft blue color in spring and summer, changing to a rich purple color in late fall. It grows close to the ground, not over 6 to 8 inches high, but spreads out a dozen feet or more, depending upon soil and planting conditions. One of Hill's new introductions. The type we grow is an especially attractive form selected from the native plants.			
4- 6 inch x Once Transplanted		15.00	140.00
10-12 " xx Twice Transplanted, B&B	12.50	115.00
1-1½ feet xx " "	17.50	165.00
Juniperus japonica (Procumbens) (Japanese Juniper)			
The following description is taken from a bulletin of the Arnold Arboretum, Harvard University: "This is the best known of the prostrate Junipers which Japan has sent to the gardens of the West. It is a plant with wide-spreading procumbent stems, blue-green, sharply pointed leaves marked on the upper surface by two white lines. It is perfectly hardy." Reaches from 10 to 15 feet in diameter, but can be kept smaller by trimming. It never grows over 8 to 12 inches high, but makes a rapid growth of long branches that cling to the ground. This variety can be used in almost any planting—for beds, for low borders, terraces, hillsides, and rock gardens, as it thrives even under adverse conditions. There is considerable variance among varieties offered as Procumbens, but we are careful to propagate only from the true strain of hardy, compact growing plants we imported direct from Japan.			
4- 6 inch x Once Transplanted		18.00	170.00
8-10 " xx Twice Transplanted		32.50	300.00
10-12 " xx " " B&B	12.50

Savin Juniper

(*Juniperus sabina*)

A low, much-branched shrub, but sometimes growing to 5 feet high in the lower Alps in southern Europe. It also occurs in the Pyrenees, mainly in Greece, but always as a Mediterranean plant. Its branches are spreading, dense, woody, ramified, and abundantly furnished with short, straight, tufted branchlets, which are well clothed with foliage. Its berries are blackish purple or dark violet in color, some smooth and shining, some glaucous or powdery, all of them small, round, or oval, about the size of small currants. Planted 4 to 6 feet apart, it forms an excellent border to larger Evergreens in the background. It is also desirable as a low tree in foundation groups and beds of Evergreens in general. It does well in smoky atmospheres.

JUNIPERS (Continued)

Variety	10	80	160
Juniperus scopulorum (Hill's Silver Juniper)			
This species of Juniper has a tendency to produce a large proportion of trees with beautiful blue foliage. At the same time it is quite variable in habit, producing many variations. Hill's Silver Juniper is narrow, compact, and symmetrical. It has one single stem, in contrast to some varieties of Junipers with several stems. This makes it safe from heavy snows and wind. The inner foliage does not turn brown, as in the Irish and Swedish Junipers, but remains a good healthy color throughout the tree.			
4-6 inch o 2 yr.	\$.....	\$ 8.00	\$ 70.00
Juniperus virginiana (Red Cedar)			
Pyramidal habit, dark green to bluish foliage. Our stock is the hardy northern strain. One of the most useful and characteristic trees of our American landscapes, rivaling the Italian Cypress in beauty. Adapted for planting in all sections of the country. The propagation of this valuable Conifer has been a specialty with us for many years and we exercise great care in the selection of our strain of seed. Also used as an understock for grafting Junipers.

1½-2 " xx " "	10.00	90.00
Juniperus virginiana cannarti (Cannart Red Cedar)			
This is a pyramidal, compact grower of medium size, reaching 15 to 20 feet. With only a few moment's trimming each spring, it can be kept at any size wanted. It has rich green, heavy tufted foliage. Some trees bear blue and silver berries, which adhere late in autumn and are greatly enjoyed by birds. This is a choice and rare variety, grown by grafting. The original trees were introduced from Europe some years ago and stocks are still quite scarce. This is one of the best Evergreens for house foundation groups.

1-1½ feet xx " " B&B	13.50	125.00
1½-2 " xx " "	15.00	140.00

Juniperus virginiana glauca (Silver Red Cedar)

In this variety, the entire young growths are of almost silvery whiteness, which changes to beautiful bluish green in winter. It never grows very large—not over 15 to 20 feet—and it can be kept even smaller if desired. This is one of the foremost among the interesting group of Junipers that have been developed from *J. Virginiana* (Red Cedar). We constantly strive to improve our strain by careful selection, and reproduce only from the best type, most true to form, color, compactness, and habits of growth. During the past few years this tree has increased in popularity until it is now found in every section of the country. It is especially adapted to the colder northern states, such as in our colder northern states. We have been unable to find the exact origin of this variety, although it is mentioned in writings of sixty years ago and is found in the English nursery catalogs of the early 70's.

JUNIPERS (Continued)

Variety	10	100	1000
Juniperus virginiana Kosteri (Koster Red Cedar)			
Semi-dwarf habit, naturally spreading, foliage dense. Good strong grower. Very hardy. Marine blue in color. Forms a wide open bush with erect and spreading, gracefully arching stems from two to three feet tall. This is an unusually handsome plant which will prove useful for the margins of beds of taller growing conifers. This variety probably originated in an European nursery.			
4-6 inch x Once Transplanted	\$.....	\$15.00	\$140.00
1-1½ feet xx Twice Transplanted, B&B.....	12.50	100.00

Juniperus virginiana pyramidalis (Hill's Pyramidal Juniper)

A new introduction by the D. Hill Nursery Company. In habit of growth it is distinct from other varieties of Junipers, forming a close-growing pyramidal tree, much like a slender tower. The foliage is a rich green and retains this color throughout the winter; it is, in fact, fully as beautiful in winter as in summer. On account of the symmetrical growth of Hill's Pyramidal Juniper is of particular value in formal gardens, and in landscape work where a tall evergreen is desired. We can recommend this variety for any place where a Pyramidal Juniper is needed.

Each x indicates one transplanting. B&B signifies balled and burlapped.

PACHYSANDRA

Japanese Spurge

(*Pachysandra terminalis*)

A splendid Evergreen ground cover with thick glossy foliage, forming a dense mat, making low growing cover plant, excellent for edging. Does well in dense shade. Hardy.

This is not a new plant but one which has been neglected. At least it has not been as widely used as its many sided desirability warrants. It is the plant which gives a finishing touch to any landscape planting. The practice should be made to sell *Pachysandra* in connection with all landscape foundation planting, groups, etc., as a ground cover.

Grows about six inches high. It will grow as well in the sun as in a shady spot. Will grow equally well in moist or dry situations.

SPRUCES

Variety	10	100	1000
---------	----	-----	------

Picea alba (See *Picea canadensis*)
The old name *Picea alba* (White Spruce) has been changed to *Picea canadensis* (White Spruce). Black Hill Spruce formerly called *Picea canadensis* is now *Picea canadensis albertiana*.

Picea canadensis (White Spruce)
A native of the northern part of America, its range extending to the coasts of the Arctic Ocean, attaining heights from 25 to 50 feet. It is thoroughly hardy, free-growing, not particular about soil, but prefers moist to dry situations. A compact and upright grower of great longevity. Trees over fifty years old remain well branched at bottom, retain their pyramidal form and annually make an upward growth. It will grow on a great variety of soils, bear crowding well, and also stand severe trimming. Being a native of cold climates it grows most successfully when planted north of a line from Philadelphia to St. Louis. White Spruce is especially suitable for tall background, shelters, windbreaks, and tall screens. When it is desired to develop single specimens, they should be allowed 12 to 15 feet for full spread of the branches. It is fairly rapid in growth, with light green foliage, slightly tinged with blue. The best type prevails through northern Wisconsin, where our seed is gathered from carefully selected grounds.

SPRUCES (Continued)

Variety	10	100	1000
Picea canadensis albertiana (Black Hill Spruce)			
The Black Hills Spruce is hardiest of all Spruces, symmetrical, compact and bushy of growth; in fact the very smallest trees soon form round, sturdy, compact bodies. As the tree grows and develops, it continues to carry this particular style of growth and generally becomes the most compact growing specimen of the Spruce family; even in old trees the lower branches are retained thus forming a close ground-cover. Botanically, the Black Hills Spruce is considered a close relative of White Spruce, which has developed its distinct characteristics through long centuries of living in the Black Hills country of Dakota. The foliage varies from green to bluish tint, and all trees are remarkable for their bright fresh color. Black Hills Spruce was first introduced to commercial culture by Mr. D. Hill many years ago and has since become widely planted throughout the country.

1-1½ feet xx Twice Transplanted, B&B.....	8.50	75.00
1½-2 " xx " " " "	10.00	90.00

Picea Engelmanni (Engelman Spruce)

The foliage of Engelman Spruce is deep blue-green. That of some trees being decidedly silvery or whitish. It grows tall, making a rather spire-like crown. As compared to the Colorado Blue Spruce the Engelman Spruce has a softer and more symmetrical appearance. It is among the hardiest and most desirable Rocky Mountain Evergreens, but it is much less known than some of the others.

"In its specific name this tree, the fairest of its race, braving the fiercest of the mountain blasts, the fiery rays of the Southern sun and the Arctic cold of the Northern winter, with tall massive shafts, brilliant in color and graceful spirelike crowns of soft foliage of tenderest hue, keeps green on a thousand mountain tops, the memory of a good and wise man."—Sargent, Silva of N. A.

4-6 inch o 2 yr.	4.50	35.00
-----------------------	-------	------	-------

Picea excelsa (Norway Spruce)

For many years Norway Spruce has been highly appreciated because of its rapid growth, its thriftiness, and its heavy masses of deep green foliage. Some of the finest old hedges are of Norway Spruce, as the trees can readily be pruned to any desired height. On farms and around homes all over the country Norway Spruce windbreaks are giving substantial protection to stock and buildings. Norway Spruce is a tall, picturesque, and hardy tree, graceful in all its lines, and well adapted to planting over a wide range of territory. As the Norway Spruce prevails over a wide range of European territory, there are many sources from which to obtain seed. Careful experiments and close study for many years have proved to us that seed from the higher elevations insures a superior type for America, therefore, we use this seed exclusively.

Picea omorica (Serbian Spruce)

This rare tree comes from the Balkans. It is seldom offered to the trade. We obtained seeds by sending a special collector, under our directions, to Servia to obtain a supply of seeds. It grows in the columnar, spire-like habit. It is very hardy and this tree should become very popular. The leaves are dark green and shiny. It is a very ornamental tree which we can highly recommend for planting in almost any section of the country.

4-6 inch o 2 yr.	7.50	65.00
-----------------------	-------	------	-------

Colorado Blue Spruce

(Picea pungens)

A leading specialty with us. The stock offered below is nursery run, containing both blue and green trees. Our careful collection of seed from the bluest trees insures an unusually high percentage of blue trees. Many authorities agree that the selected seedling trees (compared to grafted trees) are more satisfactory, and eventually make much finer specimens. We obtain our seed from the Colorado Rockies, the blue forms being glistening silvery blue in color.

PINES

Variety	10	100	1000
Pinus banksiana (Jack Pine)			
Fast growing pine well adapted to rough gravelly and sandy locations. Not particularly recommended for ornamental use, but largely for planting on dry sandy soils and hot climates such as certain sections of Nebraska, Kansas and the Dakotas. Grows and thrives on barren soils where other trees could not live.			
6-8 inch o 2 yr.	\$.....	\$ 3.00	\$ 20.00

2. *Mugo*. An upright form of the Mountain Pine found growing naturally in Italy, also abundant in the Spanish Mountains. It differs from the Mugho Pine in that it has a main stem, or leader, which predominates in successive lengths, forming a compact, conical-shaped Pine, broad at the base and tapering at the top.

4-6 inch o 2 yr.	3.50	25.00
-----------------------	------	-------

Hill's Mugho Pine

(Pinus mughus)

True Dwarf Form

Our own introduction. It is the genuine true dwarf type, many stemmed, compact, with good dark green color, which it retains throughout the winter. Many inferior forms of this variety offered as *Pinus Mughus*, are on the market, some of which are loose, open growers and some of upright, irregular habit. The strain we offer is the true dwarf, compact type, and the seed (from the Riesenbirge Range in Silesia), is obtainable only at great expense in small quantity, because of its scarcity. Rarely grows over 3 to 6 feet high.

Pinus nigra (Austrian Pine)

Sixty years ago Josiah Hoopes in his "Book of Evergreens" makes this reference to the qualities of Austrian Pine, and the record of over half a century bears out his observations: "We desire to advocate the claims of the Austrian Pine for planting wherever a strong hardy Evergreen is desired. In groups or for avenues in particular situations, it is one of the most desirable trees at our command. Taking into account its rapidity of growth and the certainty with which it will speedily produce an effect, owing also to the peculiar prominence of its general outline, we consider it unrivaled."

Any question as to its hardness is disputed, in view of a report from a Canadian authority who says: "Austrian Pine is perhaps the most ornamental exotic Pine which thrives in Canada. It is a handsome tree and makes a good lawn specimen."

Mr. C. S. Harrison, eminent Evergreen authority, says: "The Austrian Pine is a compact, symmetrical, and sturdy tree. I see one from my window which was planted in poor soil twenty-five years ago. It is a beautiful pyramid about 30 feet tall. The lower branches touch the ground."

The leaves are two in a sheath, straight and slender, from 4 to 6 inches long, and of such a deep rich green color that it is known in some parts of the world as the "Black Pine." No tree shows such remarkable resistance to the trying conditions of city planting. Coal, gas and smoky atmospheres have no effect on its growth. It is a tree equally satisfactory for seashore planting and for the inland country.

Owing to the long tap-root which Austrian Pine makes, it requires extra care in transplanting to avoid losses.

Three trees planted in the open, the diameter of the branch-spread often nearly equals the height of the tree, but in the native forests of Austria and other parts of Europe it makes a tall tree often over 100 feet high. Annual growth has been observed to be, under favorable conditions, from 12 to 18 inches or more.

Variety	10	100	1000
Pinus ponderosa scopulorum (Ponderosa Pine)			
Sometimes called Bull Pine or Western Yellow Pine. The most widely distributed Evergreen of North America. The type found growing in the Black Hills of South Dakota, from where we obtain our seed, is a much superior type, being a hardy, free, upright grower. Very deep rooted and drought resistant. It is a handsome, ornamental tree, with interesting long needles.			
4-6 inch o 2 yr.	\$.....	\$ 3.00	\$ 20.00

Pinus resinosa (Red or Norway Pine)			
One of our finest native Evergreens. Formerly grew over a wide area in the northern states. In strong demand for reforestry planting. Owing to the fact that it bears seeds only once in five or six years a supply is not always available. The leaves are in pairs, dark green and shiny, four to six inches long.			
4-6 inch o 2 yr.	4.00	30.00

Pinus strobus (White Pine)			
The White Pine is the largest of all conifers native to the eastern part of the United States. The crowns of mature White Pines in mixed forests conspicuously overtop the surrounding hardwoods. It readily adapts itself to both dry and moist soils, for it is found on the poorest and driest sand, and on steep, rocky slopes, and also on moist clay flats and river bottoms. White Pine can endure considerable shade for a number of years, but as it becomes older it requires more and more light for its development. It grows rapidly and has long, flexible needles, whitish beneath.

1½-2 " xx " " " "	12.50	100.00
2- 3 " xx " " " "	15.00

Pinus sylvestris (Scotch Pine)			
This well-known tree, though tall, seldom grows straight, and the branches shoot out rather obliquely. The bark is rough and cracked and the leaves are short, pungent, concave on the upper surface, convex on the under, and of a pale green color. This is the common Pine of Europe where it has been a valuable tree for timber and ornament for centuries. It is familiarly known in Scotland as "Scot's Fir." The rapidity of growth, great hardness, and the facility with which it may be grown on almost all soils, has rendered this tree a great favorite. However, it prefers a cool, gravelly subsoil that is well drained, and will then form a handsome tree. It always inclines more to the picturesque than to the beautiful. We obtain our seed from Sweden where the best form grows exactly suited to American conditions. Years of testing have shown that seed from other sources is likely to be inferior, and the trees unsatisfactory.

This building has a capacity to take care of 150 extra men which our nursery work requires at certain seasons. It is completely equipped, dining rooms, commissary, laundry, and recreation room.

YEWS

Variety	10	100	1000
Taxus canadensis (American Yew)			
A valuable dwarf Evergreen, seldom ever growing more than two or three feet above the ground. Has densely clothed dark green foliage. Particularly beautiful in autumn, when loaded with scarlet colored fruits. Thrives well in shade. Can be trimmed to any desired shape. Very hardy. Sometimes called Canadian Yew.			
6-8 inch x Once Transplanted.....	\$.....	\$10.00	\$ 90.00

Taxus cuspidata (Japanese Yew)			
A distinctly valuable Yew, growing 40 to 50 feet high. Under cultivation, somewhat smaller. Has been cultivated throughout Japan from time immemorial, and introduced into America many years ago, having taken its place as one of the most noteworthy and valuable on the entire list. Originating in the cold high altitudes of Northern Japan from where we obtain our seed, it is found fully able to successfully withstand extremes of heat and cold in America. Grows close, upright and compact. Foliage dark green, fruit bright scarlet.			
2- 4 inch o 2 yr.		10.00	90.00
4- 6 " x Once Transplanted		20.00	190.00
8-10 " xx Twice Transplanted		40.00

Taxus cuspidata nana (Dwarf Japanese Yew)			
Similar to Taxus Cuspidata, but is very dwarfish and compact growing. The foliage consists of little bunches of black green foliage. Of irregular and picturesque outline, ultimately becoming 2 to 3 feet high and 5 or more feet wide. Absolutely hardy. It retains its rich dark green color entirely, throughout the winter, which added to its other points of superiority, makes it one of the most valuable Yews.

The Yews

Of the eight species of Yew only the Japanese varieties and the American Yew can be recommended for general planting in this country. The English Yew, which is so popular and well established in the British Isles as well as the Irish Yew, are not able to stand the conditions in the mid-west, although succeed fairly well in some of our warmer and more humid sections of the country.

The late Professor Sargent, of Arnold Arboretum, never lost an opportunity to declare Japanese Yew the most valuable plant that Japan has contributed to New England gardens. Most of the plants having been raised from cuttings rarely develop into good trees. We raise our Japanese Yews from seedlings which insures a better type of tree with a distinct leader from the beginning.

All of the Yews are especially valuable because of their endurance of shade, and shiny green foliage with bright scarlet berries.

Taxus cuspidata
(Japanese Yew)

Taxus canadensis
(American Yew)

Taxus cuspidata nana
(Dwarf Japanese Yew)

ARBORVITAE

American Arborvitae

(Thuya occidentalis)

The American Arbor Vitae is the mother tree from which upward of fifty distinct types have been developed, varying in color from deep green to bright golden and ranging in size from little dwarfs to tall pyramidal specimens. The native forests of Arbor Vitae have long been of great commercial value for timber, producing tall, straight trunks much used for telegraph poles. The Arbor Vitae is very hardy and dependable in almost any situation. A moist location is preferred. Stands trimming well, and for this reason is widely used for hedge purposes. The rate of growth and ultimate height depend largely upon conditions. It usually grows bushy at the bottom and tapering toward the top. Foliage is very soft and flexible and of fine deep green color. Covering such a wide range in its native growths, trees from some sections are open-growing and undesirable, but we are careful to obtain our seed from certain sections of northern Wisconsin, producing stock of absolute hardness, good green color, and compact habit of growth.

***Thuja occidentalis hoveyi* (Hovey Arborvitae)**

Variety	10	100	1000
Thuya occidentalis hoveyi (Hovey Arborvitae)			
One of the old well known varieties which has been known in the trade for a great many years. It is a semi-dwarf compact grower with foliage yellowish green. Our stock is guaranteed true strain which we have been growing for a great many years.			
4- 6 inch x Once Transplanted	\$.....	\$11.00	\$ 90.00
8-10 " " "		15.00	140.00

The name Little Gem is well chosen. This is one of the few of the *Occidentalis* types of *Arborvitae* which is a true dwarf. The growth is smaller and finer in each respect, the branchlet sprays being only about three inches long and two inches across. It is an ideal tree for planting among perennials, in rock gardens or in any situation where a choice close growing dwarf tree is desired.

6-8 inch xx Twice Transplanted	25.00
8-10 " " " " B&B.....	12.50	100.00

A distinct golden type, which we have been able to improve considerably by closer selection, propagating only the brightest golden color, producing plants of exceptional merit. Rather slender in habit, reaching 12 to 15 feet high with a diameter of 2 to 2½ feet.

6-8 inch x Once Transplanted	15.00	140.00
------------------------------------	-------	--------

Variety	10	100	1000
4- 6 inch x Once Transplanted	\$.....	\$10.00	\$ 90.00
8-10 " x Once Transplanted		15.00	140.00
1½-2 feet xx Twice Transplanted, B&B.....	8.50	75.00

This is the dwarfest form. It grows in a compact and produces a broad symmetrical pyramid. It grows rather slowly, reaching a medium height. All trees have an especially fine winter color. It is really an improvement on most types of Pyramidal Arborvitae and one which should be more extensively used.

4-6 inch x	Once Transplanted	\$.....	\$15.00	\$140.00
6-8 " x	"	"	20.00	190.00

Tips of the young growth are creamy white. This is a good novelty, the best white tipped Arborvitae that we have seen. Trees of this type are not usually vigorous growing, but this form grows and handles better than most other variegated varieties.

4-6 inch x Once Transplanted	15.00
------------------------------------	-------	-------

Raised by Christopher Neder in Frankfort-on-Main, a very desirable form. Branches ascending; branchlets twisted and slightly decumbent, the branchlet sprays being about six inches by two inches. Foliage thin, fine and dark green. The whole forming a low bush, narrow at the base, with a wide cushion shaped head raised in the center, and not unlike an umbrella. Beissner records the size of the original plant in 1909 as being about two feet six inches high by three feet across the top.

6-8 inch x Once Transplanted	15.00

ARBORVITAE

Thuya occidentalis woodwardi
(Woodward Arborvitae)

Thuya occidentalis wareana
(Siberian Arborvitae)

Variety	10	100	1000
Thuya occidentalis wareana (Siberian) (Ware Arborvitae)			
Raised by and named for Mr. Thomas Ware, an English nurseryman, who produced it about 1850. It matures at 6 to 8 feet. It is conical in outline and covered with dark green foliage which is somewhat different from the American Arbor Vitae, being much heavier and deeply crested. The branches are short and stiff. It is much used for foundation planting and frequently for hedges. The name Siberian has been given to it because of its rugged constitution. A symmetrical, compact grower, very long lived.

1-1½ feet xx " " B&B.....	10.00	90.00

Thuya occidentalis woodwardi (Woodward's Arborvitae)			
This splendid globe Arborvitae is rapidly becoming one of the most popular varieties. This is due to the fact that it maintains itself well under all conditions and keeps the globe habit without trimming. Specimens reach three feet in diameter. This tree was originated and introduced by Mr. Jacob Manning, proprietor of the Reading Nursery, Reading, Mass., and named after his son, J. Woodward Manning.

A field of Spruces, under development for landscape planting. These trees have been moved for the third time in the nursery.

HEMLOCK

American Hemlock (*Tsuga canadensis*)

Josiah Hoopes, in his "Book of Evergreens," says: "The long, slender branches, drooping gracefully to the ground, present so beautiful a picture, it is indeed difficult to surpass it, and when we compare the rich dark green foliage of a healthy plant that is varied so exquisitely with the marked glaucousness of the under side of the leaves, we must admire a tree which presents such diversity of charms. A great mistake is continually being made by planting the Hemlock in dry situations; for while it cannot thrive in wet and swampy ground, it greatly prefers a rather moist, deep loamy soil and cool location, the better if partially shaded. In such spots the beauty of the foliage and luxuriant growth speedily develop themselves in the highest degree."

The regular conical form, tapering evenly from a broad base to a long, straight, and thrifty shoot, is the common shape of this tree. As a screen or hedge the Hemlock is greatly admired as it bears the shears well, grows thriftily, and is of a dark green color and very dense. The results are most satisfactory. The Hemlock will remain small for many years if sheared, so that it can be especially recommended for foundation groups and small yards.

In the past, many Hemlocks in American nurseries were imported from Europe, where they were propagated from seed collected in America in the southern states (the Carolinas, Tennessee, etc.). When these trees were shipped to America to colder climates they produced rather inferior types of trees which often winter-scalded, turned a ragged brown, or were killed outright. The value of our strain of Hemlock is based on seed selected from northern sources only, insuring trees of hardiness and free graceful upright growth.

DAPHNE CNEORUM

(Rose Daphne)

Fragrant, Flowering Evergreen Shrub

Daphne Cneorum (Rose Daphne)

Low growing Evergreen plant. Produces rosy-pink clusters of flowers that completely cover the plant and continue until freezing weather. Flowers are very fragrant. An ideal plant for garden or rockery.

We offer rooted cuttings in flats. On account of the difficulty in transplanting small sizes, these plants will be sold by the flat and will be shipped undisturbed in the flat or cutting box. There will be about 150 plants in each lot.

One year cuttings, shipment in flats, (150 to a flat), 100, \$10.00; 1000, \$90.00.

CHOICE BIOTAS

The picture above shows the root development and the general character of the trees we offer as once transplanted. The varieties pictured here include the leading varieties of Oriental Arborvitae needed for landscape work.

Thuya orientalis compacta

Thuya orientalis
(Chinese Arborvitae)

Thuya orientalis aurea conspicua
(Gold Spirea Arborvitae)

Thuya orientalis aurea nana
(Berckman Golden Arborvitae)

Thuya orientalis pyramidalis
(Oriental Pyramidal Arborvitae)

Variety	10	100	1000
Thuya orientalis (Chinese Arborvitae)			
The type usually produced from seed has a strictly pyramidal habit, reaching 20 feet or less, the branches growing vertically, sort of folded together, like the leaves of a book. The growth is dense, compact and well filled out. A feature of the plant of especial merit is the bright, fresh green foliage. The Chinese word for Arborvitae is "Hak" (everlasting life), which shows the Chinaman's tribute to the beautiful bright green color of this tree. Its hardiness is not so much a matter of latitudes as local conditions. It is primarily a tree for the south, the Pacific Coast states, and the more temperate states in the east. While it is not really satisfactory here in northern Illinois, it thrives in Michigan and Ohio and in localities fully as far north. In Texas, Oklahoma and Kansas it is of especial value, in some parts being the only Evergreen used. We have been growing this variety successfully for many years. Our plants are propagated from seed obtained in Northern China, insuring the genuine pure strain, best adapted for planting in Southeastern, Southern and Pacific Coast States.

6-8 inch o 2 yr.	4.00	30.00

Choice Assorted Biotas

Thuya orientalis aurea conspicua (Gold Spire Arborvitae)

A very narrow shaft of bright golden color. Ideal where a taller growing plant is wanted to brighten up the landscape.

4-6 inch x Once Transplanted	\$.....	\$17.50	\$165.00
6-8 inch x Once Transplanted	20.00	190.00

Thuya orientalis aurea nana (Berckman Golden Arborvitae)

The plants we offer are the genuine pure strain of Berckman's Golden Arborvitae, of much finer coloring and form than many now on the market. Rich deep golden in color. Compact and bushy. Grows 6 to 8 feet.

4-6 inch x Once Transplanted	13.00	120.00
6-8 inch x Once Transplanted	15.00	140.00

Thuya orientalis bonita

A well named variety, Bonita meaning "pretty." A beautiful, broad cone-shaped Arborvitae. Rich in color and almost perfect in form. This is a great favorite in many sections. Grows rather slowly making it very desirable in dwarf groups.

4-6 inch x Once Transplanted	13.00	120.00
6-8 inch x Once Transplanted	15.00	140.00

Thuya orientalis compacta

A type with compact, broad cone-shaped growth. Somewhat similar in shape to Berckman's, but having a good green color. A type like this is necessary where the pyramidal forms would be too large. This variety will require a little pruning to keep it in best conditions. Ultimate growth about 5 feet in diameter.

4-6 inch x Once Transplanted	13.00	120.00
6-8 inch x Once Transplanted	15.00	140.00

Thuya orientalis pyramidalis (Oriental Pyramidal Arborvitae)

Broad at the base, tapering to the top. Straight, symmetrical grower with bright green color. Very desirable as the high plant in Evergreen groups.

6-8 inch x Once Transplanted	15.00	140.00
------------------------------------	-------	-------	--------

50 of same variety and size at 100 rate; 500 at 1000 rate.

General View of Twice Transplanted B&B Evergreens

EVERGREEN SEEDLINGS

Suitable for Bedding Out. Strong, Thrifty, Well Graded Stock

The propagation of young Evergreens has been one of our specialties for a great many years, special attention being given to selection of the best strains and truest types. Our soil and climate is especially adapted to their culture. Great care is exercised in selection so that only hardy, dependable types are produced.

Please note that our seedlings are in each case two or three years old. We do not offer light grade of one year seedlings, as our experience has shown these are not practical to handle.

Section of two year old Evergreen seedling beds

The development of a good straight leader is greatly assisted by tying the leader to an iron stake with raffia or coarse string

Hill's Specimen Evergreens for Landscape Work

Hill's Specimen Evergreens are all perfect specimens, having good roots and symmetrical tops, owing to frequent transplanting, constant cultivation and root-pruning, shearing and staking. Hill's Specimen Evergreens will please your most exacting customers.

In comparing our prices with those of other growers, remember that height alone cannot by any means establish values. An Evergreen tree grown close and crowded in the row may be exactly the same height as a Hill Specimen Evergreen, but will not be as heavy, compact, symmetrical, or have as good roots.

In some localities it is impossible to dig Evergreens with a solid ball of earth on account of loose, sandy, rocky soil, which will not adhere to the roots. Our rich black prairie loam contains just enough clay to give it good texture and when interwoven with masses of fine, fibrous roots, easily holds in place. As additional protection, each earth ball is securely tied in burlap.

Constant transplanting and root-pruning gives Hill's Specimen Evergreens masses of fine, fibrous feeding roots, which together with shearing, results in heavy, bushy, symmetrical tops and insures the success of Hill's stock in the hands of the planter.

Hill's Specimen Evergreens are always worth the price you pay for them; will never disappoint you and will be found the most economical in the long run.

Specimen Evergreen Showing Hill Method of Ball and Burlap

FIRS

Variety

Each 10

Abies concolor (White Fir)

The name Concolor, given to this tree by Dr. Englemann, who discovered it about the middle of the last century, signifies even color—both the upper and under sides of the needles are beautiful grayish blue. A well-known evergreen authority says: "Concolor Fir is the showiest of all Firs. In my opinion it is the cheeriest of all Evergreens in winter. It retains its lower branches, has no insect enemies, and is the best Fir tree to withstand heat and drought." We are careful to obtain our seed supply from northern Colorado, which produces trees of absolute hardness, with striking foliage varying in color from light green to deep soft blue and with medium short needles. The strain of Concolor Fir from New Mexico, where seed is cheap and abundant, is much inferior, inclined to winter-kill, and is rather straggly, open appearance. Our trees are the true Colorado type. It is a tall symmetrical grower and is long lived under cultivation.

Juniperus chinensis columnaris (See Juniper chinensis pyramidalis)		
Juniperus chinensis (Chinese Juniper)		
<p>One of the very finest hardy plants in cultivation. It forms a compact, pyramidal tree about 20 feet in height, of bright green color with glaucous prickly shoot in the spring. It has never been injured by the most severe winters. It also makes one of the leading Junipers for the South as it stands all kinds of planting conditions with remarkable ability. Its freedom from disease and great adaptability to extremes in temperature make it a most valuable plant. Do not overlook this valuable Juniper.</p>		
1-1½ feet xx Twice Transplanted, B&B.....	\$1.25	\$10.00

Juniperus chinensis pfitzeriana (Pfitzer Juniper)

This remarkable tree is today in the front rank of ornamental Evergreen trees. Its great popularity is well earned. This is a Juniper that thrives in the hot climate of the South and still comes through the cold northern winters without a scratch. Nothing bothers it as it seems to be practically immune from plant pests of all kinds. If left alone it assumes an attractive, low, broad, irregular form. It was originated in Pfitzer's Nursery in Germany. Ludwig Spaeth, famous German nurseryman and horticulturist, introduced it into general cultivation. Through him we obtained our original plants for propagating. By propagating our own stock from selected trees we are able to insure our customers the true type of robust trees with the gray or blue-green foliage.

Juniperus chinensis procumbens (See *Juniperus japonica*)

Juniperus chinensis pyramidalis (Blue Column Chinese Juniper)

This variety was introduced to cultivation by the United States Department of Agriculture, through the late F. N. Meyer. It forms a distinct, narrow pyramid with all the leaves acicular or needle-shaped. The foliage is remarkably decorative. There are two forms—the blue and the green—which we can now furnish in good plants of the true variety. Like other forms of *J. Chinensis* they are very hardy and also retain their desirable color effect during the winter.

The habit of growth resembles that well known Italian Cypress. This tree offers to planters in colder climates the extreme narrow growing form of Evergreens heretofore so much desired but unfortunately not obtainable in a dependable tree. We are glad to assure any customers of the absolute hardness and dependability of this excellent variety.

1-1½ feet	xx Twice Transplanted, B&B	1.75	15.00

JUNIPERUS CHINENSIS PFITZERIANA (Pfitzer Juniper)

This remarkable tree is today in the front rank of ornamental Evergreen trees. Its great popularity is well earned. This is a Juniper that thrives in the hot climate of the South and still comes through the cold northern winters without a scratch. Nothing bothers it as it seems to be practically immune from plant pests of all kinds. If left alone it assumes an attractive, low, broad, irregular form. It was originated in Pfitzer's Nursery in Germany. Ludwig Spaeth, famous German nurseryman and horticulturist, introduced it into general cultivation.

Variety	Each	10
Juniper sabina prostrata (See <i>Juniper horizontalis douglassi</i>)		
Juniperus sabina horizontalis (Coast of Maine Juniper)		
This variety grows native along the bleak, rock-bound coast of Maine where it is exposed to the most severe weather conditions. It is an unusually vigorous and dependable creeping Evergreen of a distinctive and attractive, bluish-green color.		
10-12 inch xx Twice Transplanted, B&B	\$1.50	\$12.50
1-1½ feet xx Twice Transplanted, B&B.....	2.00	17.50

Juniperus sabina tamariscifolia (Tamarix Savin Juniper)

An excellent creeping dwarf variety. The foliage is fine in texture; average height is one foot, with a spread of 6 to 8 feet when full grown. Sometimes called Gray Carpet Juniper and the name Tamarisk-leaved Juniper is also applied to it. It is said to occur wild in Sicily, Greece and other places. A very vigorous grower, forming a compact and perfect mat of bluish or gray green. Grows very dense and never changes in color. Our stock is propagated from the true stock from the Kew Gardens in England.

10-12 inch xx Twice Transplanted, B&B.....	1.50	12.50
--	------	-------

Hill's Silver Juniper

(*Juniper Scopulorum*)

This species of Juniper has a tendency to produce a large proportion of trees with beautiful blue foliage. At the same time it is quite variable in habit, producing many variations. Hill's Silver Juniper is narrow, compact, and symmetrical. It has one single stem, in contrast to some varieties of Junipers with several stems. This makes it safe from heavy snows and wind. The inner foliage does not turn brown, as in the Irish and Swedish Junipers, but remains a good healthy color throughout the tree.

Juniperus virginiana glauca
(Silver Red Cedar)

Juniperus virginiana elegantissima
(Gold Tipped Red Cedar)

Juniperus virginiana globosa
(Globe Juniper)

Variety

Each 10

Juniperus virginiana elegantissima (Gold Tip Red Cedar)

Here is a tree that will give variation to the green and blue color of other Evergreens. It is rather broad and bushy, with slightly drooping foliage. In the spring when the new growth comes out it is a rich creamy golden color on the tips, gradually darkening to bronze and green as the season progresses. Unless kept low by trimming, it will grow 10 to 15 feet high. It has the characteristic Juniper foliage, soft and lacy, easily trimmed. It is beautiful in combination with almost any other variety. Likes a fairly sunny location. Ours is an improved strain of exquisite color and growth. Very hardy.

1½-2 feet xxx Three Times Transplanted, B&B..... \$3.25 \$30.00

Juniperus virginiana filifera hillii

This is a new variety of our own introduction. It grows in a pyramidal habit and has a graceful feathery foliage and develops an attractive purple plum color in the Fall.

2-3 feet xxx Three Times Transplanted, B&B 2.75 25.00

Juniperus virginiana glauca (Silver Red Cedar)

In this variety, the entire young growths are of almost silvery whiteness, which changes to beautiful bluish green in winter. It never grows very large—not over 15 to 20 feet—and it can be kept even smaller if desired. This is one of the foremost among the interesting group of Junipers that have been developed from *J. Virginiana* (Red Cedar). We constantly strive to improve our strain by careful selection, and reproduce only from the best type, most true to form, color, compactness, and habits of growth. During the past few years this tree has increased in popularity until it is now found in every section of the country. It is one of the few Evergreens that grow just as well in the south as in our colder northern states. We have been unable to find the exact origin of this variety, although it is mentioned in writings of sixty years ago and is found in the English nursery catalogs of the early 70's.

4-5 " xxxx Four " " " 8.00

Juniperus virginiana kosteri (Koster's Red Cedar)

Semi-dwarf habit, naturally spreading, foliage dense. Good strong grower. Very hardy. Marine blue in color. Forms a wide open bush with erect and spreading, gracefully arching stems from two to three feet tall. This is an unusually handsome plant which will prove useful for the margins of beds of taller growing conifers. This variety probably originated in a European nursery.

1-1½ feet xx Twice Transplanted, B&B..... 1.35 12.50

Hill's Dundee Juniper

(*Juniperus virginiana pyramidaformia hillii*)

This variety was first placed on the market two years ago and has met with instant popularity. The trees are all of compact, uniform, pyramidal habit. The color is distinct, in spring and summer the color being grayish green which changes to purple plum color as the frost comes in the fall. The original tree was selected from our own nursery several years ago and we have since then been developing a stock until we now have this variety available in the three times transplanted sizes. Reports that we have received from those who have tried it in practically all sections of the country indicate that it is adapted for planting under practically all conditions.

Each 10
3-4 feet xxx Three Times Trans., B&B \$5.00 \$47.50

Variety	Each	10
Juniperus virginiana pyramidalis (Hill's Pyramidal Juniper)		
A new introduction by the D. Hill Nursery Company. In habit of growth it is distinct from other varieties of Junipers, forming a close-growing pyramidal tree, much like slender tower. The foliage is a rich green and retains this color throughout the winter; it is, in fact, fully as beautiful in winter as in summer. On account of the symmetrical growth Hill's Pyramidal Juniper is of particular value in formal gardens, and in landscape work where a tall evergreen is desired. We can recommend this variety for any place where a Pyramidal Juniper is needed.

Juniperus virginiana globosa (Globe Red Cedar)

These are specimens of *Juniper virginiana pyramidalis* that we have trimmed into globe form. This makes an excellent globe as it has a fine type of foliage and produces a compact ball of bright green color.

15x15 inch xxx Three Times Transplanted, B.&B.....	5.00	45.00
--	------	-------

Juniperus virginiana schottii (Schott Red Cedar)
A pyramidal variety differing from its mother plant, the Red Cedar, principally in its light yellowish green color and its compact, rounded habit. It bears its bright green foliage throughout the year. The growth is compact and symmetrical and it stands trimming well. It is valuable in landscape work for its fine pyramidal shape and bright color. Use it for borders, foundation groups, and similar uses. Grows rapidly, needs plenty of sun. The origin of this tree is not definitely established, although it is thought to have originated in one of the European nurseries some years ago.

SPRUCES

Picea alba (See *Picea canadensis*)

The old name *Picea alba* (White Spruce) has been changed to *Picea canadensis* (White Spruce). Black Hill Spruce formerly called *Picea canadensis* is now *Picea canadensis albertiana*.

Picea canadensis (White Spruce)

A native of the northern part of America, its range extending to the coasts of the Arctic Ocean, attaining heights from 25 to 50 feet. It is thoroughly hardy, free-growing, not particular about soil, but prefers moist to dry situations. A compact and upright grower of great longevity. Trees over fifty years old remain well branched at bottom, retain their pyramidal form and annually make an upward growth. It will grow on a great variety of soils, bear crowding well, and also stand severe trimming. Being a native of cold climates it grows most successfully when planted north of a line from Philadelphia to St. Louis. White Spruce is especially suitable for tall background, shelters, windbreaks, and tall screens. When it is desired to develop single specimens, they should be allowed 12 to 15 feet for full spread of the branches. It is fairly rapid in growth, with light green foliage, slightly tinged with blue. The best type prevails through northern Wisconsin, where our seed is gathered from carefully selected grounds.

Picea canadensis albertiana (Black Hill Spruce)

The Black Hills Spruce is hardiest of all Spruces, symmetrical, compact and bushy of growth; in fact the very smallest trees soon form round, sturdy, compact bodies. As the tree grows and develops, it continues to carry this particular style of growth and generally becomes the most compact growing specimen of the Spruce family; even in old trees the lower branches are retained thus forming a close ground-cover. Botanically, the Black Hills Spruce is considered a close relative of White Spruce, which has developed its distinct characteristics through long centuries of living in the Black Hills country of Dakota. The foliage of the Black Hills Spruce and all trees are remarkable for their color and freshness. The Black Hills Spruce was first introduced to commercial culture by Mr. D. Hill many years ago and has since become widely planted throughout the country.

PINES

Pinus mughus (Hill's Mugho Pine)

Our own introduction. It is the genuine true dwarf type, many stemmed, compact, with good dark green color, which it retains throughout the winter. Many inferior forms of this variety offered as *Pinus Mughus*, are on the market, some of which are loose, open growers and some of upright, irregular habit. The strain we offer is the true dwarf, compact type, and the seed (from the Riesenbirge Range in Silesia), is obtainable only at great expense in small quantity, because of its scarcity. Rarely grows over 3 to 6 feet high.

The selection of Evergreen seed is of vital importance. Next to insuring a reliable source of supply direct from the collectors is the inspection of the seed, to test its germination and its purity.
All seed planted in our nursery comes from definitely known sources.

Variety	Each	10		
Pinus nigra (Austrian Pine)				
Sixty years ago Josiah Hoopes in his "Book of Evergreens" makes this reference to the qualities of Austrian Pine, and the record of over half a century bears out his observations: "We desire to advocate the claims of the Austrian Pine for planting wherever a strong hardy Evergreen is desired. In groups or for avenues in particular situations, it is one of the most desirable trees at our command. Taking into account its rapidity of growth and the certainty with which it will speedily produce an effect, owing also to the peculiar prominence of its general outline, we consider it unrivaled."				
Any question as to its hardness is disputed, in view of a report from a Canadian authority who says: "Austrian Pine is perhaps the most ornamental exotic Pine which thrives in Canada. It is a handsome tree and makes a good lawn specimen."				
Mr. C. S. Harrison, eminent Evergreen authority, says: "The Austrian Pine is a compact, symmetrical, and sturdy tree. I see one from my window which was planted in poor soil twenty-five years ago. It is a beautiful pyramid about 30 feet tall. The lower branches touch the ground."				
The leaves are two in a sheath, straight and slender, from 4 to 5 inches long, and of such a deep rich green color that it is known in some parts of the world as the "Black Pine." No tree shows such remarkable resistance to the trying conditions of city planting. Coal, gas and smoky atmospheres have no effect on its growth. It is a tree equally satisfactory for seashore planting and for the inland country.				
Owing to the long tap-root which Austrian Pine makes, it requires extra care in transplanting to avoid losses.				
In old trees planted in the open, the diameter of the branch-spread often nearly equals the height of the tree, but in the native forests of Austria and other parts of Europe it makes a tall tree often over 100 feet high. Annual growth has been observed to be, under favorable conditions, from 12 to 18 inches or more.

Pinus strobus (White Pine)

The White Pine is the largest of all conifers native to the eastern part of the United States. The crowns of mature White Pines in mixed forests conspicuously overtop the surrounding hardwoods. It readily adapts itself to both dry and moist soils, for it is found on the poorest and driest sand, and on steep, rocky slopes, and also on moist clay flats and river bottoms. White Pine can endure considerable shade for a number of years, but as it becomes older it requires more and more light for its development. It grows rapidly and has long, flexible needles, whitish beneath.

6-7	xxx	" " " " " " " " " " " "	6.00	55.00

Pinus sylvestris (Scotch Pine)

This well-known tree, though tall, seldom grows straight, and the branches shoot out rather obliquely. The bark is rough and cracked and the leaves are short, pungent, concave on the upper surface, convex on the under, and of a pale green color. This is the common Pine of Europe where it has been a valuable tree for timber and ornament for centuries. It is familiarly known in Scotland as "Scot's Fir." The rapidity of growth, great hardness, and the facility with which it may be grown on almost all soils, has rendered this tree a great favorite. However, it prefers a cool, gravelly subsoil that is well drained, and will then form a handsome tree. It always inclines more to the picturesque than to the beautiful. We obtain our seed from Sweden where the best form grows exactly suited to American conditions. Years of testing have shown that seed from other sources is likely to be inferior, and the trees unsatisfactory.

PSEUDOTSUGA**Pseudotsuga douglassi (Douglas Fir)**

Since Dr. Archibald Menzies, a ship surgeon with Van Couver's expedition, first discovered it on Vancouver Island, in the year 1791, the Douglas Fir has been known by nearly thirty specific and varietal names. It was subsequently found in 1827 by David Douglas, a Scotch explorer, and was later named in his honor. There are two distinct forms of Douglas Fir—one the dark green, gigantic-growing timber tree of the northwestern Pacific Coast area, and the other the type from Colorado. The latter variety is the one recommended, both for its hardness and its great beauty. The typical form of young trees is an open, broad, sharp-pointed pyramid; the lower branches are straight or somewhat drooping, and the middle or higher ones trend upward.

Our plants are the type from northern Colorado, the seed being collected in deep gorges of high altitudes, where the blue and silvery foliage is characteristic. The growth is compact and symmetrical with rather short needles, in contrast to southern Colorado and New Mexico types which are of doubtful hardness, irregular, and open growing. By personally supervising the collection of seed we grow only the genuine Colorado type, and can assure our customers that the trees from our nursery are superior in color and habit of growth—a tree that is widely appreciated in both Europe and America.

It reaches 60 feet or more in height, with a spread of branches 12 to 18 feet. It is a rapid grower and thrives well in almost any situation. Plant with plenty of room for future development.

Variety

Each	10
------	----

Similar to *Taxus Cuspidata*, but is very dwarfish and compact growing. The foliage consists of little bunches of black green foliage. Of irregular and picturesque outline, ultimately becoming 2 to 3 feet high and 5 or more feet wide. Absolutely hardy. It retains its rich dark green color entirely, throughout the winter, which added to its other points of superiority, makes it one of the most valuable Yews.

1½-2 feet xxx Three Times Transplanted, B&B	4.50	40.00

Thuya occidentalis (American Arborvitae)

The American Arbor Vitae is the mother tree from which upward of fifty distinct types have been developed, varying in color from deep green to bright golden and ranging in size from little dwarfs to tall pyramidal specimens. The native forests of Arbor Vitae have long been of great commercial value for timber, producing tall, straight trunks much used for telegraph poles. The Arbor Vitae is very hardy and dependable in almost any situation. A moist location is preferred. Stands trimming well, and for this reason is widely used for hedge purposes. The rate of growth and ultimate height depend largely upon conditions. It usually grows bushy at the bottom and tapering toward the top. Foliage is very soft and flexible and of fine deep green color. Covering such a wide range in its native growths, trees from some sections are open-growing and undesirable, but we are careful to obtain our seed from certain sections of northern Wisconsin, producing stock of absolute hardness, good green color, and compact habit of growth.

A really valuable Golden form originated by Robert H. Douglas. A good golden color, not so bright as Peabody's, but a superior grower forming a broad bushy heavy specimen.

1-1½ feet xx Twice Transplanted, B&B	1.50	12.50
--	------	-------

Round, bushy and compact. Good green color, very hardy.

10-12 inch xx Twice Transplanted, B&B	1.25	10.00
---	------	-------

One of the old well known dwarf forms similar to *Thuya Compacta*, but smaller and finer in every respect, the branchlet sprays being about three inches long by two inches across, the whole forming a small compact ball.

8-10 inch xx Twice Transplanted, B&B	1.50	12.50
--	------	-------

The features desired in a Pyramidal Arbor Vitae are dense, compact growth, narrow and pyramidal form, deep rich green color at all seasons, uniform habit of each tree and hardness to withstand conditions here in the northern states. Planters everywhere tell us that Hill's Pyramidal Arbor Vitae answers this description better than any other type. It reaches a height of 15 to 20 feet and usually measures not more than 2 feet in diameter at the base. With few exceptions, it has but one main stem, which makes it less liable to damage from snow.

A Bird's Eye View of the Hill Nursery

Variety	Each	10
Thuya occidentalis wareana (Siberian) (Ware Arborvitae)		
<p>Raised by and named for Mr. Thomas Ware, an English nurseryman, who produced it about 1850. It matures at 6 to 8 feet. It is conical on outline and covered with dark green foliage which is somewhat different from the American Arbor Vitae, being much heavier and deeply crested. The branches are short and stiff. It is much used for foundation planting and frequently for hedges. The name Siberian has been given to it because of its rugged constitution. A symmetrical, compact grower, very long lived.</p>

HEMLOCK

Tsuga canadensis (Hemlock)

Josiah Hoopes, in his "Book of Evergreens," says: "The long, slender branches, drooping gracefully to the ground, present so beautiful a picture, it is indeed difficult to surpass it, and when we compare the rich dark green foliage of a healthy plant that is varied so exquisitely with the marked glaucousness of the under side of the leaves, we must admire a tree which presents such diversity of charms. A great mistake is continually being made by planting the Hemlock in dry situations; for while it cannot thrive in wet and swampy ground, it greatly prefers a rather moist, deep loamy soil and cool location, the better if partially shaded. In such spots the beauty of the foliage and luxuriant growth speedily develop themselves in the highest degree."

The regular conical **form**, tapering evenly from a broad base to a long, straight, and thrifty shoot, is the common shape of this tree. As a screen or hedge the Hemlock is greatly admired as it bears the shears well, grows **thriftily**, and is of a dark green color and very dense. The results are most satisfactory. The Hemlock will remain small for many years if sheared, so that it can be especially recommended for foundation groups and small yards.

In the past, many **Hemlocks** in American nurseries were imported from Europe, where they were propagated from seed collected in America in the southern states (the Carolinas, Tennessee, etc.). When these trees were shipped to **America** to colder climates they produced rather inferior types of trees which often winter-scalded, turned a ragged **brown**, or were killed outright. The value of our strain of Hemlock is based on seed selected from **northern** sources only, insuring trees of hardiness and free graceful upright growth.

D. HILL NURSERY CO.

Evergreen Specialists—Largest Growers in America

DUNDEE, ILLINOIS

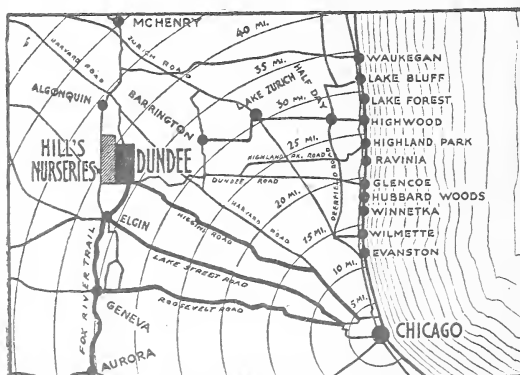

How to Reach Our Nursery

Visitors are always welcome. We are conveniently located only 42 miles northwest of Chicago.

Convenient trains operate on both the C. & N. W. Railway and the C., M. & St. P. Railway between Chicago and Elgin (5 miles from Dundee). At Elgin interurban cars may be used or we will gladly meet trains at Elgin if notified by telephone, Dundee 217.

For an hourly service from Chicago, take the C., A. & E. Electric Line at Wells Street and Jackson Boulevard, direct to Elgin, transferring to the Dundee - Carpentersville car, getting off at Stop No. 4, from where it is but a two-minute walk direct to our office, which is located right on the nursery grounds.

Paved roads from Chicago bring you direct to our Nursery.
